

Everyone has a unique identity. No two people are exactly alike.

Our identities are formed by intrinsic and extrinsic factors.

How you view yourself changes all the time.

Social Identity

We all also have social identities.

Social identities are categories based on shared social constructs.

Social identities are often at the root of unequal power or privilege.

Social identities also lay the foundation for bias, stereotypes, prejudice, and favoritism

The impact of social identities is contextual

Example: In the US and UK, the academic calendar has breaks at Easter and Christmas. What if you celebrate Lunar New Year and Ramadan with your family?

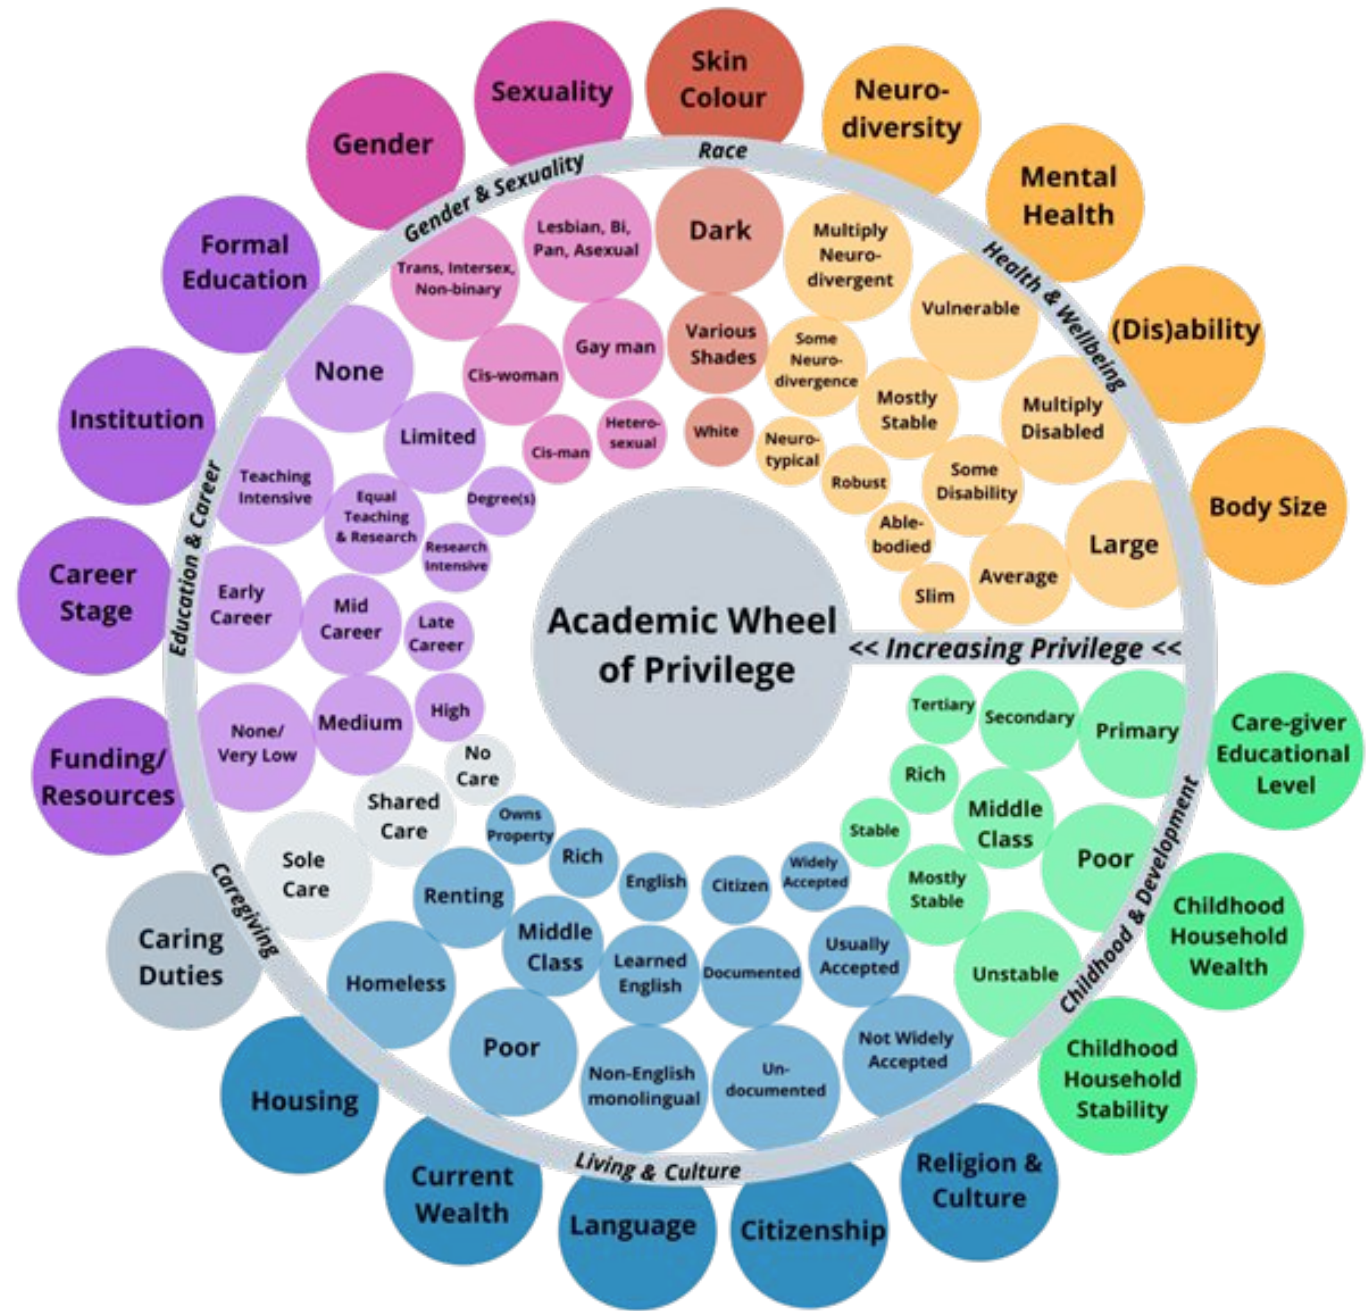

Example: Language proficiency is context dependent. English as a first language is a great help in science, but doesn't help in many countries.

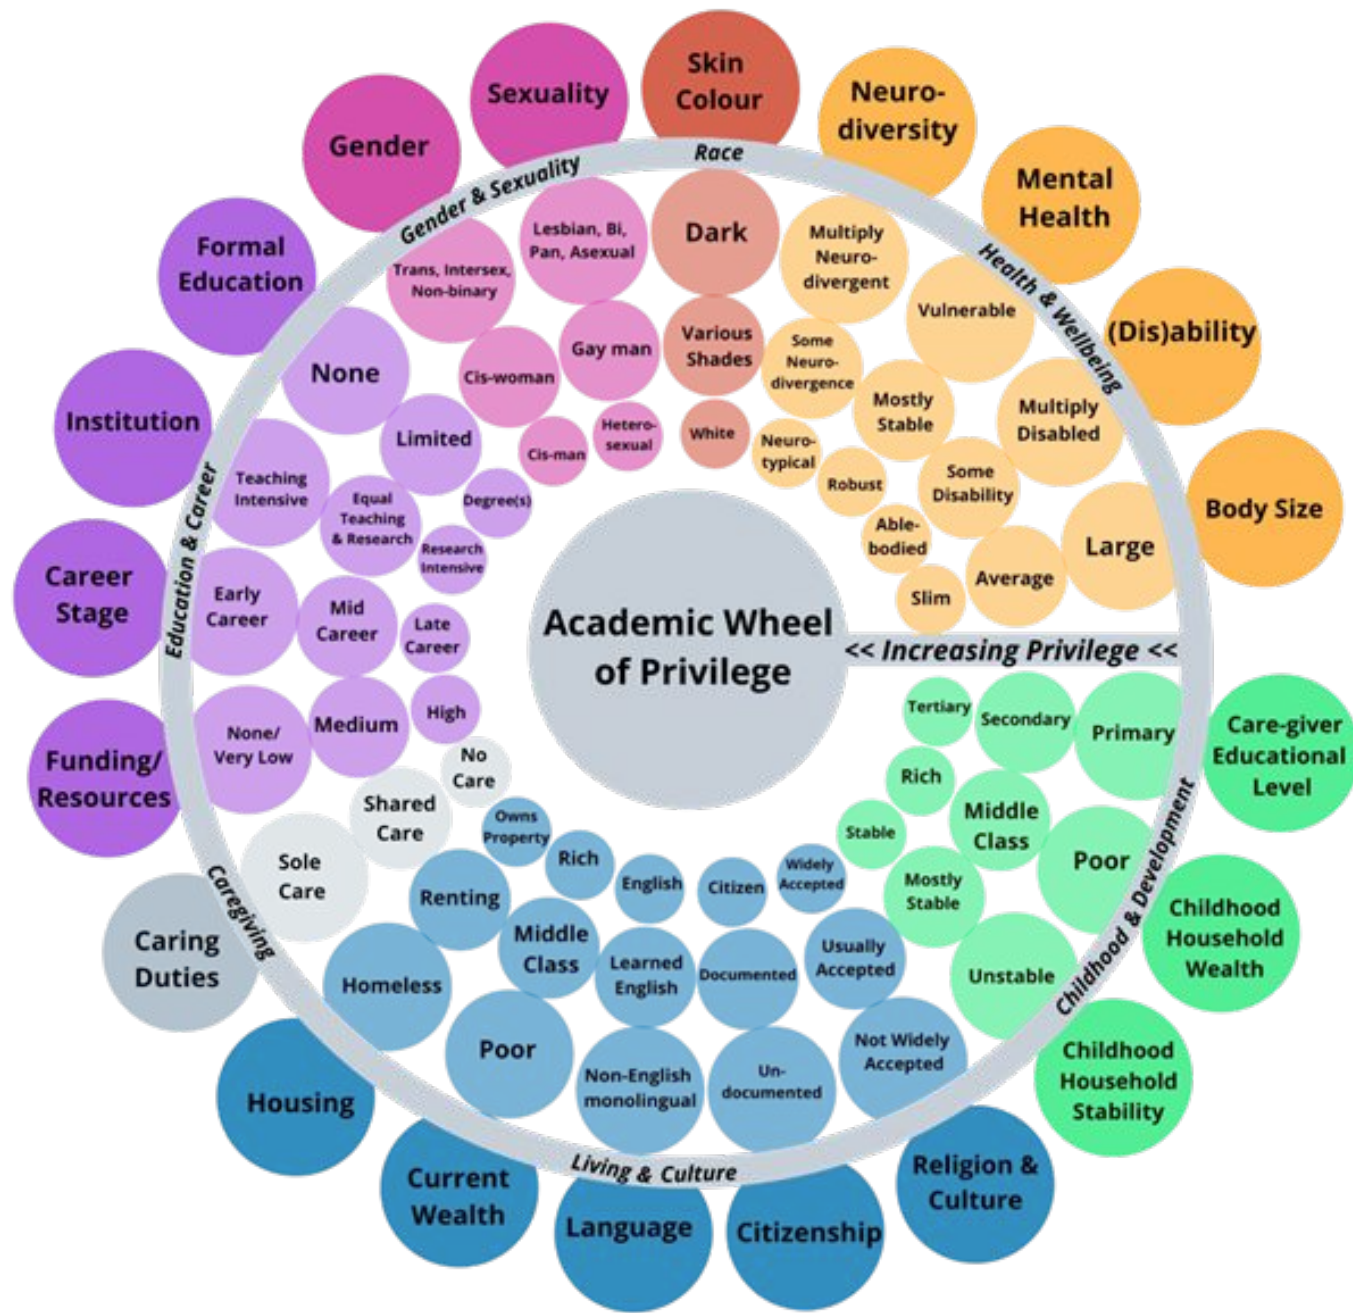

The impact of social identities is contextual

Example: Language proficiency is context dependent

★ Mark where you are on each axis of identity.

★ Mark where you are on each axis of identity.

1. Which categories are most important to your sense of self (how you think of who you are).
2. Which categories have had the greatest **positive** impact on your success in science?
3. Which categories have had the greatest **negative** impact on your success in science?

Discussion guidelines

Participate respectfully

Listen to understand
and learn

Uphold confidentiality –
don't share someone
else's story

Paired discussion (8 min)

Take turns sharing how your social identities positively and negatively have impacted (are impacting, will impact) your career as a scientist.

Group discussion (7 min)

As you feel comfortable, share insights from this activity and your discussions.

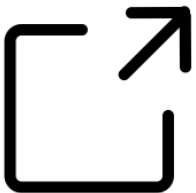

Please raise your hand to be called on.

Paired discussions

Read the case study assigned to your breakout room, then answer the following questions

- What identities / intersections do you notice?
- How does the structure of academia exclude them based on their identities?
- Implications for mentoring – how would you mentor this person? What resources are available for them? If you don't know, how would you find out?

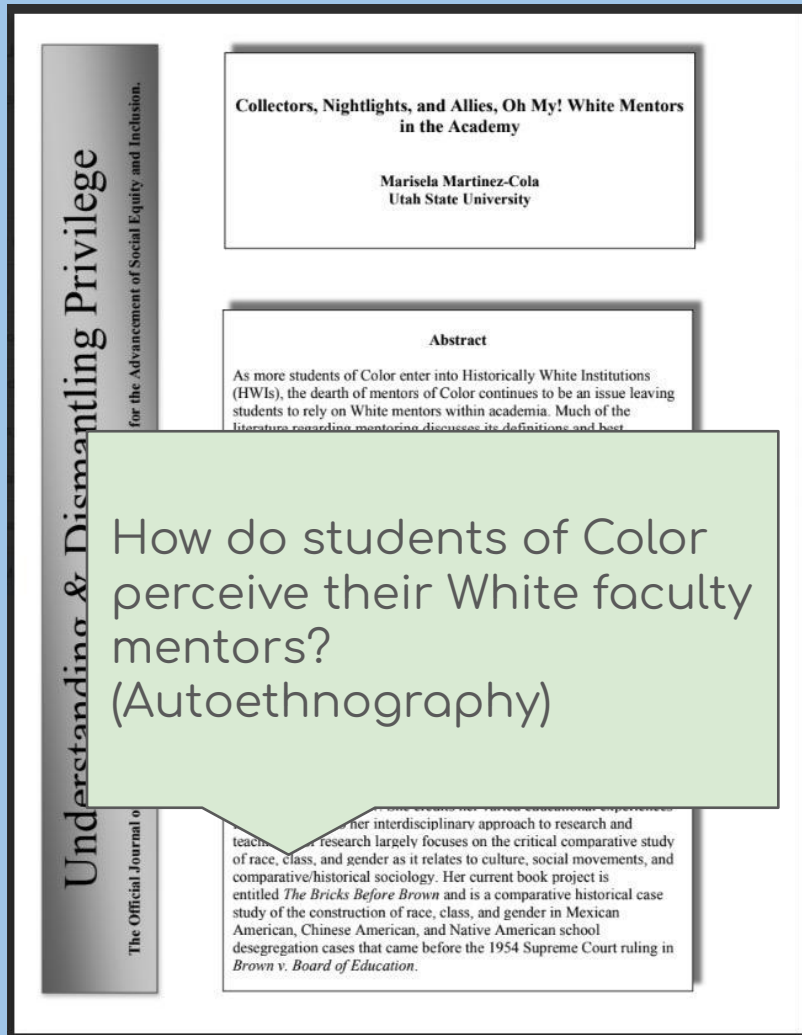

Case studies and discussion questions

Next week's pre-work: Sign up for 1 of 3 reading options (aiming for 3 ~ equal groups):

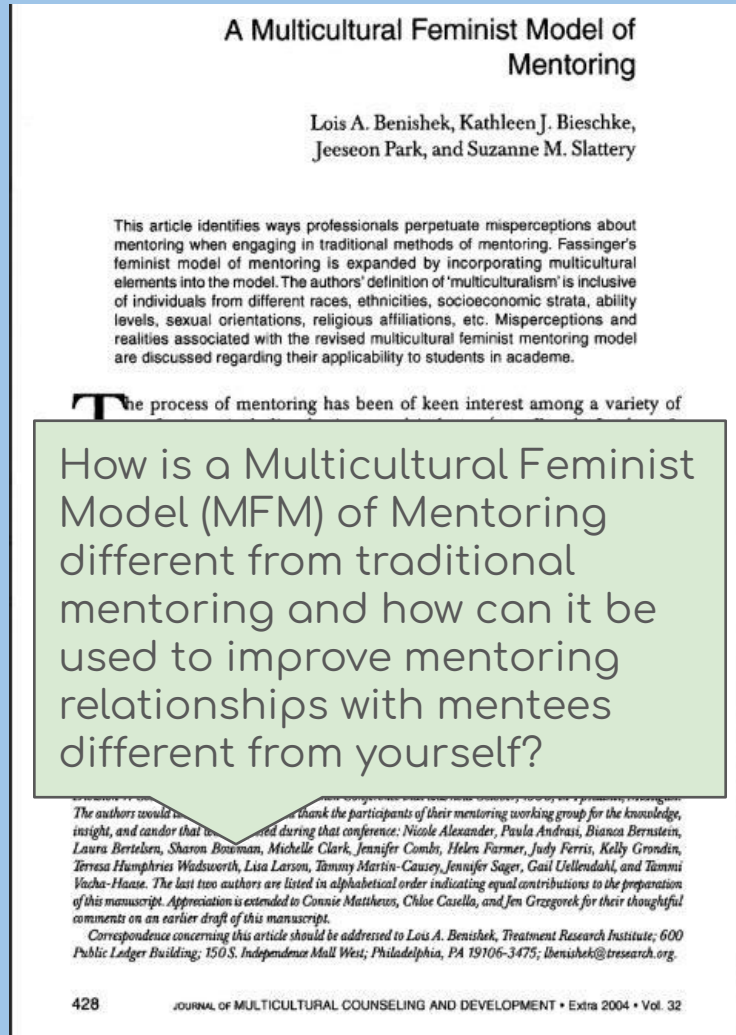

Option #1 (16 pages)

Martinez-Cola (2020)

Option #2 (14 pages)

Benishek et al. (2004)

Option #3 (7 pages)

Tanner & Allen (2007)
